

# FROM CONCEPTION TO REALITY: PEAK 10

For this project, like all of our projects, we created a 3D Model using Fabrication CADMEP to use in the BIM Model.

The 3D Model was broken out into spool drawings and the renderings became a reality after being made and shipped directly from our corporate prefabrication facility.

This job was a true feather in our cap. We are grateful to have worked with Turner Construction and everyone else involved. Thank you for allowing us to show you how we can make your ideas a reality.
